Talkelmer's disease, Parkinson's disease, anyotrophic lateral sclerosis, retinitis pigmentosa, and cerebellar degeneration, myelodysplastic syndromes such as aplastic anaemia, ischaemic injuries such as myocardial infarction, stroke, and reperfusion injury, toxin-induced diseases such as alcohol-induced liver damage, cirrhosis, and lathyrism, wasting diseases such as cachexia, viral infections, and osteoporosis. They can also be used to stimulate cell proliferation for use in transplantation or to produce cells to fight an infection or a cancer or to correct a genetic defect in a disease such as sickle cell beta thalassemia, cystic fibrosis or Huntington's chorea. Antagonists can be used to prevent or treat a disorder associated with cell proliferation e.g. cancers or inflammation, e.g. Addison's disease, adult respiratory distress syndrome, allergies, asthma, atherosclerosis, bronchitis, cholecystius, diabetes mellitus, emphysema, attopic demmatitis, dermatomyositis, diabetes mellitus, emphysema, attopic demmatitis, glomerulonephritis, coult, Graves' disease, hypereosinophilia, irritable bowel syndrome, lupus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           osteoarthritis, osteoporosis, pancreatitis, polymyositis, rheumatoid arthritis, scleroderma, Sjogren's syndrome, and autoimmune thyroiditis, complications of cancer, haemodialysis, extracorporeal circulation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RABP-3. The Rab proteins, RABP-1, RABP-2 and RABP-3 are involved in vesicle trafficking, cell function, and cell differentiation. The RABP polypeptides, DNAs and agonists can be used to prevent or treat a disorder associated with an increase in apoptosis, e.g. infectious or genetic immunodeficiencies, neurodegenerative diseases such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       encodes a human Rab protein of the invention, designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          erythematosus, multiple sclerosis, myasthenia gravis, inflammation,

```

the DAXX gene can be identified by comparing the frequency of the genotype or haplotype in a population exhibiting the trait with that of a reference population. A higher frequency in the trait population indicates an association. Methods involving genotyping or haplotyping of the DAXX gene of an individual can lead to prediction of haplotype palrs for the DAXX gene of related individuals, and may be useful in studying the expression and biological function of DAXX, as well as in developing drugs targeting this protein. Polymorphic variants of DAXX are useful in studying the effect of the variation on the biological activity of DAXX is well as on the binding affinity of candidate drugs targeting DAXX for the treatment of autoimmune diseases and other immune disorders. Polymorphism is also useful for studying population diversity, anthropological lineage, paternity testing, forensic applications, and can indentifying associations between the DAXX genetic variation and a trait such as level of drug response or susceptibility to disease. DAXX proteins may be used to measure binding affinities of one or more

proteins may be used to measure binding aff candidate drugs targeting the DAXX protein.

4
number of colorectal cancer antigens. These are shown in AAA157619 and AAA3869-AAA48641. These can be used in the diagnosis, prevention and treatment of cancer of the colon and/or rectum. The present sequence is a colorectal cancer antigen genomic sequence. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The present invention provides the protein and coding sequences of a number of colorectal cancer antigens. These are shown in AAAIS7547-AAIS7619 and AAM38569-AAM38641. These can be used in the diagnosis, prevention and treatment of cancer of the colon and/or rectum. The present sequence is a colorectal cancer antigen genomic sequence. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the colon and rectum including colorectal cancers and also for testing and detection e.g. diagnosis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; SEQ ID NO: 328; 522pp + Sequence Listing; English

The present sequence is given in a specification relating to isolated human proteins designated INTERCEPT 217, INTERCEPT 297, TANGO 276, TANGO 292, TANGO 331 and TANGO 332. These proteins are useful as modulating agents or as targeting agents for developing agents to regulate cellular processes e.g. growth, proliferation, survival, differentiation and activity of human tissues. Diseases which can be diagnosed, prevented and treated by administration of these polypeptides, their nucleic acids and modulators include cancers, inflammatory classis. Nucleic acids encoding the isolated proteins can be used to express the proteins in a host cell in gene therapy applications. Antisense molecules or ribozymes can be used to inhibit expression of the proteins in target cells. Fragments of the nucleic acid molecules encoding the isolated proteins are used as hybridisation probes and as
                                                                                                                                                                                                                                                                                                                                                               Isolated human proteins are used for diagnosis, treaument with prevention of cancers, inflammatory disorders, cardiac disorders e.g.

CGT is a type 2 membrane protein useful for inhibiting a binding event between a selectin and a selectin ligand, which comprises contacting the selectin with a non-sulphated selectin ligand, GST and a small molecular agent that inhibits the sulphation activity of GST. GST is also useful in inhibiting a selectin mediated binding event. GST is useful in gene therapy to treat disorders such as acute or chronic inflammation. Systemic lupus erythematosus (SID), rheumatoid arthritis, polyarteritis nodosa, polymyositis, dermatomyositis, systemic sclerosis, diabetes, glomerulonephiritis, myasthenia gravis, Syogren's syndrome, Hashimoto's anaemia, demyelinating disease, adrenalitis, hypoparathyroldism, pernicious anaemia, demyelinating diseases, cirrhosis, ulcerative colitis, dermatitis, myocarditis, regional enteritis, adult respiratory distress conforme, infantile eczema, psoriasis lichen planus, allergic rhinitis, bronchial asthma, hypersensitivity, rheumatic fever and tissue rejection curring transplantation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is human glycosyl sulfotransferase-4 (GST-4) genomic DNA encoding GST-4alpha and GST-4beta. GST-4 gene is found on chromosome 16q23.1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Db 54991 aaaaattagctgggcgtggtggcagacgcctgtaatcccagctacttgggaggctgaggc 55050

The present invention provides the process and of colorectal cancer antigens. These are shown in number of colorectal cancer antigens. These can be used in the AAI57647-AAI57619 and AAM3869-AAM38641. These can be used in the diagnosis, prevention and treatment of cancer of the colon and/or rectum diagnosis, prevention and treatment cancer antigen genomic sequence.
                                                              The present sequence is a colorectal cancer antigen genomic sequence. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                              DNA fragmentation factor polypeptides and polynucleotides, useful inhibiting the growth of cancer cells, as well as for inducing
                                                                                                                                                                         The present sequence encodes a human DNA fragmentation factor subunit of 40 kDa, designated DFF40. The specification also describes DFF45. DFF40 is capable of inducing apoptosis, and may contain a nuclear localisation fragment. DFF45 acts as a molecular chaperone to direct the folding of DFF40. Although all DMSes activity; as associated with DFF40, DFF activity only occurs once DFF40 is complexed with DFF45. The DFF polypeptides and polynucleotides are useful for inhibiting

comprising 40kDa and 45kDa subunits. DFF45 acts as molecular chaperone to facilitate the appropriate folding of DFF40 and acts as a molecular chaperone to facilitate the appropriate folding of DFF40 and acts as an inhibitor for DFF40 and DFF45 are used in gene therapy. The modulators of human DFF40 activity are useful for inducing apoptosis and for treating hyperproliferative disorders such as restenosis, psoriasis, metastatic tumours, angiogenesis and benign and malignant neoplasias. They are also used for treating cancers of the brain (glioblastoma, astrocytoma, oligodendroglioma and ependymoma), lung, liver, spleen, kidney, lymph node, pancreas, small intestine, blood cells, colon, stomach, breast, endometrium, prostate, testicle, ovary, skin, head and neck, oesophagus, bone marrow, blood, other tissue and multi-drug resistant cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA fragmentation factor; DFF; apoptosis; molecular chaperone; nerapy; hyperproliferative disorder; therapy; tumour; restenosis; is; angiogenesis; cancer; cytostatic; neoplasia; ss.

The present invention describes low adenosine (A) content antisense oligonuclectides and compositions (I) comprising them. In the antisense coligonuclectides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antifilammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonuclectides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and nor specific enzymes, binding proteins, adenosine melecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central
                                                                                                                                                                                                                                                                                                                                                                        receptors, CNS and peripheral instructs and increase system peptide transmitters, defensins, growth factors, vasoactive peptides and transmitters, defensins, growth factors, vasoactive peptides and antisense oligonucleotides may be used in this way to treat disorders. Including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(les) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), pulmonary transplantation rejection, pulmonary disease (COPD), pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or cancer. AART8434 to AART8433 represent human polynucleotide transments and antisense oligonucleotides used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          atgagaatcgcttgaaccgggggaggcagatgttgcagtgagccgaggcggccactgca 1988

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation.

erice allittic the lings of a subject they can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the incledition sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 185, but the sequences are also called SEQ ID NO:1 to 185, but the sequences are also called SEQ ID NO:1 to 185, but the sequences called sequences. SEQ ID NO:1 to 185 sequences are also ealted SEQ ID NO:1 to 185. but the present invention, W.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2340 ggtcccttagagataagagacaatcataaggggagatatcagagaaaatcgtaaggggag 2399

Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions -

Disclosure; Page 975-978; 1592pp; English.

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antinfilammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and mallighancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adenosine receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, defensins, growth factors, vasocative peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction
